PRELIMINARY FORECAST OF THE JUTE CROP OF BENGAL, 1905.

THE following note is published for general information.

R. W. CARLYLE,
Offg. Chief Secy. to the Govt. of Bengal.

The 21st July 1905.

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

PRELIMINARY FORECAST FOR THE JUTE CROP OF BENGAL, 1905.

1. *Explanatory.*—The forecast relates to the 27 jute districts of Bengal. Hooghly and Howrah have now been treated separately. By arrangement between the Local

Government and the Chamber of Commerce the materials on which the forecast is based have been already placed at the disposal of the public. Criticism and suggestions have been invited. Only the Director's own summing-up has been kept confidential until the time of its publication. I desire to express my thanks to those who, in the public press and otherwise, have helped me to form an opinion on the local reports and estimates.

2. *Trade conditions.*—The demand for jute has been keen and high prices have ruled during the cultivation season. The figures for the crop of 1904 are not yet complete, but everything points to the conclusion that the estimate of my predecessor, Mr. Maddox, namely, 74 lakhs of bales, will be justified by the event. The approximate figures of the previous seasons, based upon trade statistics, are noted below for easy reference—

Season	1900	=	64½	lakhs of bales.
Do.	1901	=	73½	ditto.
Do.	1902	=	65	ditto.
Do.	1903	=	71½	ditto.

3. *Weather conditions.*—The season of 1905 has had clearly defined characteristics. The winter was unusually cold and unusually prolonged; in spring and early summer the showers were copious and the thunder-storms were severe; the monsoon was late in coming and the heat of June was excessive. There has been a fair amount of rain in July up to date, but it is too early to say whether a heavy monsoon may be expected. Taking the province as a whole the weather has been moderately favourable to the jute crop, but in some tracts (particularly in the Rajshahi Division) weeding operations were seriously impeded by the spring and summer rains. A caterpillar has also, during the last few weeks, been attacking the plant in some of the South-Gangetic districts. The fields in the neighbourhood of Calcutta show evident signs of this pest. So far, no reports of damage by caterpillars have come from the chief jute-producing districts, and it is not anticipated that the provincial outturn has been seriously affected. The inter-relationship between the rainfall and the jute outturn is so close that I have added a special appendix to this forecast showing from 1902 onwards the rainfall, district by district, between March and June in the jute-producing area of the province. The figures for rainfall, read in conjunction with the trade statistics quoted in paragraph 2, cannot fail to be of interest to the trade. They give a solid basis upon which any one who desires can build up a calculation for the present crop. In this summary I need only draw attention to the following instructive figures, showing the rainfall in inches

for April and May (the important weeding months) in the six great jute-districts of the province:—

	1902.	1903.	1904.	1905.
Mymensingh ...	23	11	29	24
Rangpur	17	8	27	23
Tippera	30	7	28	17
Purnea	8	2	8	9
Dacca	31	5	17	21
Pabna	16	4	20	18

It should be explained that these figures relate to district head quarters. In Purnea the bulk of the jute is grown in Kissenganj subdivision, where the rainfall is heavier than at the head-quarters. The figures, however, give a fair indication of the character of the present season compared with the preceding years. It only remains to add that in these six districts the rainfall of June 1905 has not been greatly dissimilar from the rainfall of June 1904. In Mymensingh and Rangpur the rainfall of June 1905 has been heavier than in the preceding year; in Dacca and Pabna it has been lighter; while in Purnea and Tippera there has been little change.

4. *District returns.*—The area under jute last year, as worked out by Mr. Maddox, was 2,850,000 acres. (The detailed district returns according to the figures which he accepted came to 2,850,900). In the present season the district returns show an area of 3,161,400 acres. In arriving at this figure I have reproduced the area reported by the District Officers except in the case of Rangpur. It will be remembered that in 1904 the Collector of Rangpur estimated the jute acreage of his district at 428,900, but Mr. Maddox reduced the figure to 387,000. The earlier reports from this district for the current year pointed to a figure approximating to the Collector's figure of 1904. I have, however, received a telegram from the Collector yesterday in which he places the acreage for the current year at 366,900. I have myself visited the district early in June and have made enquiries from a number of cultivators. I cannot but think that the Collector's present estimate is somewhat below the mark. On the whole it will, I think, be safe to take the figure of Mr. Maddox, namely, 387,000, until further information can be obtained. Turning to the outturn per acre I find that the district figures work out to between 86 and 87 per cent. The important districts of Mymensingh and Purnea report full outturns per acre, Tippera 90 per cent. per acre, Dacca and Pabna 80 per cent., and Rangpur only 66 per cent. On the one hand the tendency to underestimate must be discounted; and on the other hand the damage done by caterpillars in certain districts, after the preparation of the returns, must be taken into consideration. On the whole I think it safe to take 87 per cent. as the provincial outturn per acre. This is slightly larger than the

figure accepted by the Director last season, and the general similarity between the climatic conditions of the two seasons points to a somewhat similar outturn per acre. To sum up, if the climatic conditions of July, August and September 1904 are approximately reproduced in 1905, we may expect an outturn per acre in the current year 2 per cent. greater than the outturn per acre of the preceding year; but the area under jute will be 11 per cent. greater.

5. In the detailed statements which are being printed district by district, I have omitted all mention of a "normal area." The expansive condition of the jute industry makes any abstraction of this sort entirely misleading. The area worked out by Mr. Maddox for 1904 will be found in the detailed statements. This area, which has been justified by events, will be found more useful than an imaginary "normal." It only remains to add that where figures taken from cadastral surveys are available, I have embodied them in the detailed statements with a note as to the year in which the survey took place. These figures are of considerable use in testing figures for unsurveyed tracts.

	Bogra ...	869,760	622,900	132,300	134,000	78	87	No jute ...	(a) 28,233	1893 to 1894	4,187	The high price of jute last year and the seasonable rain this year account for the increase in both the area and estimated outturn. (a) This represents the area of the Jaipur Government estate.	
	Pabna ...	1,176,960	865,300	193,300	200,600	87·5	80	Very little	...	.		The increase in the area sown is due to early rainfall. The low outturn may be attributed to heavy rains in the beginning.	
	Dacca ...	1,780,450	1,214,500	195,400	210,100	100	80	Little	...	...		Untimely rainfall has retarded the growth of the crop this year, hence the outturn is less than the preceding year. The district not having been cadastrally surveyed, columns 10 to 12 are left blank.	
	Mymensingh	4,052,480	2,405,000	725,000	(b) 795,200	70	101	No jute ..	...	...	...	(b) The increase is due to the revision of the normal area.

The figures in columns 4 and 6 have been revised after the report of the Travelling Overseer, Agricultural Department. I am, however, in doubt, about the figures in column 4, but as a cadastral survey of the district will soon be made, the matter will be set right. Jute has suffered much owing to untimely rain. The outturn this year has, therefore, been estimated at 80 per cent.	
	Backergunge	2,906,880	1,416,500	10,000	18,000	50	40	Little ...	1,193,370	1901 to 1904	22,438	On account of the excessive rain and consequent high water at the sowing season the area and outturn this year is much below the normal.	The Cadastral figures show that the jute area in this district is larger than was hither to supposed. The survey is still in progress.

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; g, gloomy; d, drizzling rain; p, passing temporary showers.

FINANCIAL DEPARTMENT.

NOTIFICATIONS

No. 270-O.—The 31st July 1905.—It is hereby declared that a competitive examination for three appointments in the Opium Department will be held in February 1906. At this examination only such European and Eurasian candidates as have been nominated by the Lieutenant-Governors of Bengal and the United Provinces of Agra and Oudh, each of whom is authorized to make as many nominations as he considers necessary or desirable (those made by the Lieutenant-Governor of the United Provinces being subject to ultimate approval by the Lieutenant-Govenor of Bengal), will be permitted to present themselves.

It must be clearly understood by competitors that the candidates who may be declared successful will not be entitled to obtain permanent appointments in the grade of Assistant Opium Agents, until permanent vacancies occur in that grade, nor until they have complied with the conditions of rule 12, but it is the intention of Government to appoint them at once to duty in the Department as Officiating Assistant Opium Agents on a salary of Rs 200 a month each If within two years of their appointment they succeed in passing the departmental examinations, and are well reported on, and there are no vacancies in the Department at the time, they will be allowed to draw Rs. 250 a month each from the date of passing such examinations; and on being subsequently appointed to substantive posts, they will be allowed to count service for promotion from the date on which they commenced to draw Rs. 250 a month. Pending such substantive appointment they will remain on a probationary footing and will have no claim to permanent appointment unless their work continues satisfactory.

The pay of officers of the Opium Department will rise, with length of service, according to the following scale and the rules governing service in that Department :—

Years of approved service.	Pay. Rs.
1, 2, 3, 4 (commencing from the date on which departmental examinations are completely passed) ...	250
5, 6, 7	300
8, 9, 10	350
11, 12, 13, 14	400
15, 16, 17, 18	500
19, 20, 21, 22	600
23, 24, 25, 26	700
27 and upwards	800

Promotion to the two highest grades of Sub-Deputy Opium Agent on Rs. 900 and Rs. 1,000 will be made by selection for ability and good service.

2. A certificate of health and physical fitness, signed by a covenanted medical officer in the form given in the margin, will be required from each candidate, who should also furnish a copy of his baptismal certificate, in the absence of which sufficient evidence as to age should be forwarded with the application for admission to the examination. No one whose age will be below 19 years on the 1st February 1906, or above 22 years on the 1st March 1906, will be permitted to appear.

I do hereby certify that I have examined Mr. , a candidate for employment in the Opium Department, and that he has no disease, affection, or bodily infirmity, and is, in my opinion, possessed of a robust constitution well fitted for the performance of the duties appertaining to such an appointment. His age is, according to his own statement, years and by appearance years.

THE SCHEDULE.

(*See section 21.*)

ACTS REPEALED.

Year.	No.	Short title.	Extent of repeal.
1870	XXIII	The Indian Coinage Act, 1870.	So much as is unrepealed.
1893	VIII	The Indian Coinage and Paper Currency Act, 1893.	So much as relates to the Indian Coinage Act, 1870.
1899	XXII	The Indian Coinage and Paper Currency Act, 1899.	So much as relates to the Indian Coinage Act, 1870.

STATEMENT OF OBJECTS AND REASONS.

THE object of this Bill is to consolidate the Acts relating to the coinage. The law, as originally formulated in the Indian Coinage Act, 1870 (XXIII of 1870), has been materially modified by two Acts, namely, the Indian Coinage and Paper Currency Act, 1893 (VIII of 1893), which abolished obligatory free coinage, and the Indian Coinage and Paper Currency Act, 1899 (XXII of 1899), which made gold coins a legal tender. The present Bill proposes to repeal both these Acts as well as the main Act of 1870, to reproduce their provisions, so far as they are still required, in a consolidated form, and to provide for the introduction of a nickel one-anna piece and of a bronze coinage.

2. The *Tabular Statement* annexed shows how each provision of the existing law has been dealt with in the process of consolidation, while the *Notes on Clauses* below indicate the more important of the amendments of the existing law proposed in the Bill.

The 17th July, 1905.

E. N. BAKER.

Notes on Clauses.

Clauses 2 (a) and 3.—The definition of the expression "the Mint," as contained in section 3 of the existing law, and the language of the provisions of section 28, clauses (8) and (9), of that law, which give power to establish or abolish Mints, have been generalized, so as to make it clear that it is not obligatory on the Government to maintain any particular Mint.

Clauses 6, 7, 8 and 9.—These clauses relate to the proposed new nickel and bronze coins.

Clause 10.—This reproduces the substance of sections 10 and 11 of the existing Act with a new power to settle the dimensions of coins.

Clause 13 is new, making the nickel one-anna piece a legal tender up to one rupee.

Clause 14.—This clause puts the proposed new bronze coins in the same position as the old copper ones, making them legal tender up to one rupee.

Clause 16.—The language of sub-clause (*c*) has been slightly expanded, so as to make it clear that the clause gives power to cut all coins described in the proviso to clause 12.

Clause 17.—This clause proposes three changes of substance in the law. Firstly, it provides that coins which have lost weight not otherwise than by reasonable wear shall be received at their full nominal value: under the existing law, coins which have so lost more than two per cent. are receivable at the rate of one rupee per tola. Secondly, it provides that coins which have been shroff-marked or defaced for the purpose of converting them into ornaments, may be received at rates to be prescribed by rule. Thirdly, it provides that coins which have lost weight otherwise than by reasonable wear, but have not been clipped or filed or defaced, may be received at rates to be prescribed by rule, instead of being returned to the tenderer.

Clause 18, which corresponds to section 28 of the existing Act, takes new power to make rules (1) [sub-clause (*a*) (*c*), (*d*) and (*e*)], prescribing the percentages and the rates of payment required to be fixed for the purposes of clause 17, and (2) [sub-clause (*a*) (*f*)] providing for the acceptance at prescribed rates by authorised officers of gold coins which are of less weight than "the least current weight," and are therefore not legal tender under the provisions of clause 11.

Clause 20 is new and has been inserted with the view to make it clear that the provisions of the proposed Act will relate only to the making of coins to be issued under the authority of the Government of India, and therefore that there is no legal obstacle to the present practice under which coins (as, *e.g.*, Straits dollars) are made at the Mint for issue by other Governments.

Clause 21.—The proviso to this clause, which deals with repeals, provides for the continued coining of the present copper coins, which are to be legal tender as if they were the new bronze coins contemplated by the Act, until such time as the Governor General in Council may otherwise direct. The object of this provision is to enable copper coins to be coined during the period which may elapse before the arrangements for bronze coinage are completed.

(2) Vessels entering or leaving must keep southward of an imaginary line joining the south-western point of Nikolskago island and the southern extremity of Sho shin to (Bretel island).

Port Adelaide river—No. 2 Light Beacon removed and Red Light exhibited.

No. 279 (third publication).—With reference to Notice to Mariners No. 228, dated 24th June 1905, issued by this office, the President of the Marine Board, Port Adelaide, has given further notice (No. 18 of 1905) informing Masters of Vessels, Pilots, and others that Deepening Operations in the vicinity necessitate the removal of No. 2 Light Beacon, and that on and after the 1st July next a Red Light in lieu thereof will be exhibited from the Red Pile Beacon south of No. 3. This Light on with No. 4 will point out when to turn off No. 1 lead (two Red lights) and direct the course towards No. 3 Light Beacon.

Sailing Directions.

By night.—In approaching the anchorage vessels of deep draught should not bring the White Light on the old structure to bear north of N. E. by E. in order to avoid the four-fathom patch, which bears N. W ½ N. from the Light on Wonga Shoal; then get the outer leads [which consist of Two Red Lights vertical seven (7) feet apart and Two White Lights vertical seven (7) feet apart] in line; keep these in line passing between the Occulting Light on the Red Buoy and the Outer Green Light on the north bank, also between the other Green Lights on the north bank and the White Lights on the revetment mound.

Steer on the same line until the two Red Lights of No. 1 lead are coming on; then steer with them on line until the Red Light south of No. 3 Beacon is on with No. 4; then direct the course to pass a safe distance off No. 3; then steer for a like distance off No. 4, and so on from beacon to beacon round the point until No. 9 is reached. From a safe

distance off No. 9 the lights of No. 10 lead will be seen; keep them in line until the Red Light is about a quarter of a point open to the right of the White Light of No. 11 lead; then gradually alter the course to bring the lights of No. 11 lead in line; keep them in line (a sharp lookout being kept for the mooring buoys on the starboard hand) until the lights of No. 12 lead are seen coming into line; proceed as before by altering the course before the lights are on with each other. The same applies in the change from No. 12 to No. 13 leads; when the lights on the wharves are seen opening out off Luff Point, alter the course so as to round the point at a safe distance, and then up the centre of the Channel, looking out for the Mooring Buoys on the starboard hand.

By day.—The directions by day are the same as by night, merely substituting the Beacons for the Lights.

In going outwards the directions are just the opposite to those given for coming inwards; but in such case, in changing from one lead to another, the course should be gradually altered when abreast of the Low (Red) Beacon of each lead.

This affects Admiralty Charts 2389B, 1750, and 1752.

RESOLUTION REVIEWING THE TRIENNIAL REPORT ON VACCINATION IN BENGAL FOR THE YEARS 1902-1903, 1903-1904 AND 1904-1905.

MUNICIPAL DEPARTMENT—SANITATION.

Darjeeling, the 26th July 1905.

RESOLUTION—No. 1824T.—M.

READ—

The Triennial Report on Vaccination in Bengal for the years 1902-1903, 1903-1904 and 1904-1905.

Read also—

The Annual Statistical Returns and Short Notes on Vaccination in Bengal for the years 1902-1903 and 1903-1904.

The number of vaccinators has remained almost unchanged since 1888, but each man now performs on the average 50 per cent. more operations than he did at that time. The improvement in this respect has been continuous. The average number of operations performed in each year of the triennium under review was2, 809,506, or 978 per vaccinator, as compared with 2,420,552, or 834 per vaccinator, during the previous three years. Less than 5 per cent. of the total number of operations consist of revaccinations. According to the returns nearly two-fifths of the total infant population of the Province was vaccinated in 1904-1905. The improvement which has taken place in the period under review is confined to rural areas. There has been a falling off in Municipalities, especially in Calcutta, where only one-quarter of the infant

population was protected by vaccination in 1904-1905. This is most unsatisfactory, and the Sanitary Commissioner should give the matter his close personal attention during the coming season.

2. There are marked variations in the amount of work done in different parts of the Province. In the Dacca and Chittagong Divisions there were respectively 48 and 46 vaccinations per thousand of the population in 1904-1905; in the Burdwan, Bhagalpur, Orissa and Chota Nagpur Divisions the number ranged from 36 to 38; while in the Presidency Division it was only 32, in Rajshahi 30 and in Patna 27 per mille. Of individual districts the best results were obtained in Faridpur and Darjeeling (63 and 62 per mille respectively); and the worst in Patna, Saran and Shahabad (from 21 to 22 per mille). There is no correlation between the number of operations and the varying prevalence of small-pox; and the greatest success has been attained in the tracts which are least afflicted by that scourge. The Sanitary Commissioner is of opinion that an epidemic of small-pox leads to a larger number of vaccinations; but although such a result might be anticipated, it is not borne out by the statistics; nor are the figures to be explained by the reputed attitude of the people towards vaccination. The Ferazis of East Bengal are said to be exceptionally hostile, but this is precisely the part of the Province where the greatest success has been attained. The backward state of the work in Shahabad is attributed to the character of the people; but it is almost equally backward in Patna, where the inhabitants are supposed to be less obstructive.

3. The real factors affecting the results are doubtless the efficiency of the staff, the degree of supervision exercised by the Civil Surgeons and the officers of the Sanitary Department, and the interest taken in the work by District Officers. The Lieutenant-Governor notices that the improvement which took place last year in Midnapore, Cuttack and Noakhali is attributed to the active co-operation of the District Officers; while that in the Tributary States of Orissa is accounted for by the supervision exercised by one of the Deputy Sanitary Commissioners. The Sanitary Department is now at its full strength for the first time for some years; and Sir Andrew Fraser hopes that this will lead to a marked improvement in the outturn in the more backward districts. District Officers will again be asked to do what they can during their tours to promote the cause of vaccination by enlisting the sympathy of the people with whom they may come in contact and by taking a personal interest in the work done by the vaccinators.

4. The question of making the vaccinating staff more efficient has recently engaged the attention of the Lieutenant-Governor. Proposals for raising the status of the inspecting officers have been submitted to the Government of India, and a system of rewards to vaccinators has been introduced. A scheme for the better training of the vaccinators and inspecting staff and for the more extended use of calf lymph is under consideration.

By order of the Lieutenant-Governor of Bengal,

E. A. GAIT,

Offg. Secretary to the Govt. of Bengal.

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

Such drums or receptacles must be packed in strong wooden cases, the thickness of the wood being not less than half an inch. Provided that wooden cases shall not be necessary when the drums or receptacles are made of tin, galvanized-sheet iron, or steel, and have the following thickness of metal :—

	Not less than
(1) when the capacity does not exceed 2 gallons ...	25 B. W. G.
(2) when the capacity exceeds 2 gallons, but does not exceed 4 gallons	22 B. W. G.
(3) when the capacity exceeds 4 gallons	16 B. W. G.

(*b*) An air space of at least one-tenth of its capacity must be left in each drum or receptacle.

(*c*) The drums or receptacles must be so substantially constructed and secured as not to be liable, except under circumstances of gross negligence or extraordinary accident, to be broken or become defective, leaky or insecure.

(*d*) Before any vessel which contains or has contained dangerous petroleum is repaired by the licensee, or is sent by him to be repaired, the vessel shall, as far as practicable, be cleared of all dangerous petroleum and of all dangerous vapours arising from the same.

(*e*) The building in which the petroleum is to be stored must be constructed of masonry or other uninflammable material, with terraced, tiled or iron roof and a tiled, paved or earthen floor.

(*f*) Either (*1*) the doorways and other openings of such building must be built up to such a height above the level of the road or street, or the floor thereof must be sunk to such a depth below the level of the road or street, that the petroleum stored in it cannot flow out of the building in case of its escape from the receptacles in which it is contained, *or* (*2*) the building must be surrounded with a masonry wall or embankment sufficiently high to contain all the petroleum in the building in case of its escape therefrom: Provided that combination of methods (*1*) and (*2*) may be adopted.

(*g*) All ventilating openings in such building must be protected by strong wire gauze.

(*h*) No smoking or light or fire of any description shall be permitted at any time within or near any such building.

(*i*) All due precautions must be taken for preventing (*1*) accidents by fire or explosion and (*2*) access by unauthorised persons to any dangerous petroleum or to any vessels containing or intended to contain or having actually contained the same.

(*j*) Every person managing, or employed on or in connection with, the building in which the petroleum is stored shall abstain from any act whatever which tends to cause fire or explosion and the doing of which is not reasonably necessary, and shall prevent any other person from doing any such act.

Copies of all printed papers which it is considered desirable to make public will be placed daily on the Press table. Admission to the room will be by cards issued to the accredited representatives of newspapers of suitable standing. Application for such cards should be made by the Proprietors of the newspapers concerned to the Chief Secretary to the Government of Bengal.

3. The present practice of distributing Government Reports, communiques, etc., will cease in the case of such newspapers as may receive permission to send representatives to the Press room.

ORDER.—Ordered that this Resolution be published in the *Calcutta Gazette*, and that copies, together with the rules to be framed for regulating the working of the Press room, be forwarded to the several Departments of this Government for information and guidance.

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; p, passing temporary showers; d, drizzling rain.

DRAFT RULES.

4A. Notwithstanding anything contained in rules 3 and 4,* licenses for the possession of dangerous petroleum otherwise than in bulk shall be granted only on the following conditions :—

* For these rules, see notification No 24 Marine, dated 15th March 1904.

(*a*) The petroleum must be stored in gas-tight tin or galvanised-sheet iron, steel or lead-plate drums or receptacles, each containing not more than 10 gallons and fitted with well-made filling holes and well-fitting screw-plugs or fitted with screw-cap with metal air-tight under-cap. Such drums or receptacles must be packed in strong wooden cases, the thickness of the wood being not less than half an inch. Provided that wooden cases shall not be necessary when the drums or receptacles are made of tin, galvanized-sheet iron, or steel, and have the following thickness of metal :—

	Not less than
(1) when the capacity does not exceed 2 gallons ...	25 B. W. G.
(2) when the capacity exceeds 2 gallons, but does not exceed 4 gallons	22 B. W. G.
(3) when the capacity exceeds 4 gallons	16 B. W. G.

(*b*) An air space of at least one-tenth of its capacity must be left in each drum or receptacle.

(*c*) The drums or receptacles must be so substantially constructed and secured as not to be liable, except under circumstances of gross negligence or extra-ordinary accident, to be broken or become defective, leaky or insecure.

(*d*) Before any vessel which contains or has contained dangerous petroleum is repaired by the licensee, or is sent by him to be repaired, the vessel shall, as far as practicable, be cleared of all dangerous petroleum and of all dangerous vapours arising from the same.

(*e*) The building in which the petroleum is to be stored must be constructed of masonry or other uninflammable material, with terraced, tiled or iron roof and a tiled, paved or earthen floor.

(*f*) Either (*1*) the doorways and other openings of such building must be built up to such a height above the level of the road or street, or the floor thereof must be sunk to such a depth below the level of the road or street, that the petroleum stored in it cannot flow out of the building in case of its escape from the receptacles in which it is contained, *or* (*2*) the building must be surrounded with a masonry wall or embankment sufficiently high to contain all the petroleum in the building in case of its escape therefrom: Provided that combination of methods (*1*) and (*2*) may be adopted.

(*g*) All ventilating openings in such building must be protected by strong wire gauze.

(*h*) No smoking or light or fire of any description shall be permitted at any time within or near any such building.

(*i*) All due precautions must be taken for preventing (*1*) accidents by fire or explosion and (*2*) access by unauthorised persons to any dangerous petroleum or to any vessels containing or intended to contain or having actually contained the same.

(*j*) Every person managing, or employed on or in connection with, the building in which the petroleum is stored shall abstain from any act whatever which tends to cause fire or explosion and the doing of which is not reasonably necessary, and shall prevent any other person from doing any such act.

(*k*) The said building shall be liable to inspection by an officer authorised in this behalf.

(*l*) No drum or other receptacle containing dangerous petroleum shall be opened or the petroleum drawn off within the room in which the stock of petroleum is kept.

(*m*) The filling or replenishing of any vessels with dangerous petroleum shall not be carried on, nor shall the contents of any such vessel be exposed, in the presence of fire or artificial light, except a light of such strength, position and character as is not liable to ignite any inflammable vapour arising from the petroleum ; and no artificial light shall be brought within dangerous proximity of the place where any vessel containing dangerous petroleum is kept.

(*n*) The following distances must be kept clear from the protected works round the building in which the petroleum is stored, namely:—

It should be noted that the numbers of the outer leads have been altered.

The positions of all the above lights, as well as those supplied by the Light's Passage Harbour Contractors, are shown on Amended Chart obtainable at these offices.

Sailing directions.

By night.—In approaching the anchorage vessels of deep draught should not bring the White Light on the old structure to bear north of N.E. by E. in order to avoid the four-fathom patch, which bears N.W. ½ N. from the Light on Wonga Shoal; then get No. 1 lead [which consists of two Red Lights vertical seven (7) feet apart and Two White Lights vertical seven (7) feet apart] in line; keep these in line passing between the Occulting Light on the Red Buoy and the Outer Green Light on the North Bank, also between the other Green Lights on the North Bank and the White Lights on the revetment mound.

Steer on the same line until the two Red Lights of No. 2 lead are coming on; then steer with them on line until the Red Light south of No. 3 Beacon is on with No. 4; then direct the course to pass a safe distance off No. 3; then steer for a like distance off No. 4, and so on from Beacon to Beacon round the point until No. 9 is reached. From a safe distance off No. 9 the Lights of No. 10 lead will be seen; keep them in line until the Red Light is about a quarter of a point open to the right of the White Light of No. 11 lead; then gradually alter the course to bring the Lights of No. 11 lead in line; keep them in line (a sharp lookout being kept for the mooring buoys on the starboard hand) until the Lights of No. 12 lead are seen coming into line; proceed as before by altering the course before the Lights are on with each other. The same applies in the change from No. 12 to No. 13 leads; when the Lights on the wharves are seen opening out off Luff Point, alter the course so as to round the point at a safe distance, and then up the centre of the Channel, looking out for the Mooring Buoys on the starboard hand.

By day.—The directions by day are the same as by night, merely substituting the Beacons for the Lights.

In going outwards the directions are just the opposite to those given for coming inwards; but in such case, in changing from one lead to another, the course should be gradually altered when abreast of the Low (Red) Beacon of each lead, excepting No 2 lead. In this case, when abreast of No. 3 Beacon gradually alter the course to bring the Light of No 4 Beacon between the Light of No. 3 Beacon and the Red Light on the Beacon south of it, until the two Red Lights of No. 2 lead are coming in line, then bring the Red Light on with No. 4 Beacon, and proceed outwards with No 2 lead in line.

During the progress of the work at the Light's Passage Harbour Works masters of vessels exempt from pilotage may, if they so desire, avail themselves of the services of a pilot to assist them in passing such works, either in or out, at one-half the usual rates.

If the usual exemption flag is not hoisted, it will be taken as a signal that a pilot is required. At night, if a pilot is required, the usual signal for a pilot should be shown.

N.B.—Owing to the nature of the work in progress, this notice may require to be amended from time to time, and, therefore, should be treated as tentative only.

This affects Admiralty Charts 2389A and B, 1750 and 1752.

Hose-carts with 400 feet of hose are also kept at the Sukeas Street, Fenwick Bazar, Jora Bagan, Coomertoy, and Alipore police-stations for emergencies. A new fire station has been constructed at Garden Reach, where a manual engine and 600 feet of hose are kept and two tindals and 12 khalasees are employed. This station has been opened from April 1905.

3. A statement showing the receipt and expenditure of the fire-brigade is annexed to this report. The year opened with a balance of Rs. 22,026-1-6, the receipts amounted to Rs. 93,715-5, and the total expenditure to Rs. 97,969-8-3, leaving a balance of Rs. 7,775-8-3 at the close of the year.

Receipts.—Fees under the Petroleum Act realized Rs. 917 as against the estimate of Rs. 400. Hire of fire-engines Rs. 800 as against Rs. 300. The sale of horses realized Rs. 650. The net result was an actual increase in receipts of Rs. 1,613-15 over the estimate. There were no proceeds on the sale of unserviceable hose and engines during the year.

Expenditure—

(*a*) Under the head of Establishment, the increase against Lall Bazar is due to the payment of leave allowance to the Chief Engineer, who was on leave out of India. The decrease against the other stations represents savings due to vacancies in the rank of khalasees, and to the staff at Garden Reach not having been employed until late in the year, on quarters being built for them.

(*b*) The net increase, amounting to Rs. 2,826-0-9 under the head of Contingencies is due to the purchase, during the year under review, of improved gun metal instantaneous couplings for 14,350 feet of hose and 24 double outlet swivel head copper standpipes, bottoms screwed for ground hydrants and outlets fitted with instantaneous connections and accessories. These instantaneous couplings are in substitution of the old-fashioned screw couplings and will make for efficiency and expedition of service at fires.

(*c*) Under the head of "Other charges" there was a net increase of Rs. 820-2-9 due to payment for "Water pressure."

Out of the closing balance of Rs. 7,775-8-3, a sum of Rs. 14,526, estimated in the Budget on 31st March 1905, as the anticipated balance for 1905-06, has been taken as a set-off in determining the contribution payable by the several Municipalities during the current year.

4. The following table gives the number of fires and the way they were dealt with :—

Description of fire.	Number of fires.	Number of fires attended by fire-brigade.	Number of fires extinguished by residents.	Number of fires attended by Port Fire Engines.
1	2	3	4	5
Fires at which property destroyed, valued at Rs. 50 or more	55	35	14	6
Fires at which property destroyed, valued at less than Rs. 50	65	14	51	Nil

Eight of these fires occurred in buildings licensed under Act I of 1893 in which property to the total value of Rs. 6,01,840 was destroyed.

The total estimated value of the property destroyed by fire was Rs. 9,63,409-3, against Rs. 4,12,264, the value of the property destroyed in 1903-04.

The following were the most serious fires :—

On the 2nd April 1904 a fire broke out at the Union Jute Mill, Sealdah, and a portion of a room, batching machinery and a large quantity of jute was burnt. The fire lasted for four hours and the loss was estimated at Rs. 30,000.

On the 21st July 1904 a fire broke out at the Goosery Cotton Mill, Howrah, and a three-storied pucca building, containing spining and carding machinery was burnt. The fire lasted for 17½ hours and the loss was estimated at Rs. 3,00,000.

On the 26th November 1904 a fire broke out on board the S.S. *Aparima* at No. 5 Calcutta Moorings and destroyed jute and gunny bags to the value of Rs. 2,80,000. The fire lasted for 12 hours.

On the 8th December 1904 a fire broke out at No. 9 Goa Bagan Street, where three tiled godowns filled with wheat, gunny bags and machinery were burnt; the loss was estimated at Rs. 10,000. The fire lasted for 3½ hours.

On the 13th January 1905 a fire broke out on the Port Commissioners' ground at Ramkristopore, Howrah, and the following damage was done. The total loss was Rs. 35,000. The fire burnt for about 34½ hours.

(1) A two-storied pucca house partly destroyed.
(2) A large corrugated shed and about 4 maunds of paddy burnt.
(3) A corrugated shed and a quantity of lime belonging to the Sutni Lime Co. destroyed.
(4) The E. I. Railway record office was slightly damaged.
(5) A large corrugated iron shed containing about 6,000 maunds of rice was burnt.
(6) A two-storied tiled hut containing 2 bullocks, 1 cow, 2 calves and 1 horse was destroyed. The live stock was badly injured.

Two persons named Joggessur Ahir, aged 50 years, and his grand-daughter, Soondari aged 10 years, were burnt to death while asleep on the upper storey of the hut.

On the 9th February 1905 a fire broke out at the Baranagore Branch Jute Mill, and a pucca godown with corrugated roof, about 1,88 bales of jute and 400 bags of cops, each bag containing about 68 lbs. of cops were destroyed. The loss was estimated at about Rs. 60,000. The fire lasted for 26 hours.

On the 12th March 1905 a fire broke out at the Sulkea Jute Press, Howrah, and a large two-storied pucca godown with galvanized roof, containing baled jute, hemp, cotton and machinery was destroyed. The total loss was Rs. 2,00,000 and the fire lasted for 37 hours and 15 minutes.

On the 14th July 1904 a small petrol fire occurred in a store-room in Bhowanipur. The neighbours foolishly attempted to beat the fire out with bamboos through the window, but only succeeded in breaking a tin, thus causing a sudden conflagration, which burnt a number of persons, two of whom named Hikayet and Bissart, subsequently died in hospital.

5. Four licenses were granted under section 36, Act I of 1893, for letting off fire-works, rockets, etc. Only one license was suspended under section 37 of the Act during the year.

Two prosecutions were instituted under Act IV of 1884, for manufacturing fire-works without licenses. In both the cases the accused were convicted and fined.

6. A memorandum of fires in the town and suburbs of Calcutta and in Howrah is attached.

ANNUAL REPORT ON THE GOVERNMENT CINCHONA PLANTATION AND FACTORY IN BENGAL FOR THE YEAR 1904-1905.

No. 2003T.M.—The 11th August 1905.—The following extracts from the Annual Report on the Government Cinchona Plantation and Factory in Bengal for the year 1904-1905 are published for general information.

E. A. GAIT,

Offg. Secy. to the Govt. of Bengal.

Forty-third Annual Report of the Government Cinchona Plantation, British Sikkim, being that for the financial year 1904-1905, and also the Report of the Factory for the same year, by Captain A. T. GAGE, I.M.S., *Acting Superintendent of Cinchona Cultivation in Bengal and Acting Government Quinologist.*

1. *Weather and general.*—The rainfall during the year at Mungpoo was 130·82 inches, or about 8 inches above the average; at Munsong 92·03 inches, the average for the past four years being 90·37 inches. In January a severe hailstorm did considerable damage to the seedlings in the head-quarters nurseries, and in February a number of plants growing on the highest parts of Rungbee and Nalladara were killed by the severe frost.

2. *Plantation and Crop.*—During the year 473,011 plants were put out, of which 434,915 were *Cinchona Ledgeriana* and 38,096 were *Hybrid No. 2.* Of the *Ledgeriana* plants, 151,468 were put out at Mungpoo, 144,600 at Labdah, and 138,847 at Munsong, covering respectively 55·64 acres, 53·12 acres, and 51 acres, or a total of 159·76 acres. Of *No. 2 Hybrid*, 13,639 plants were put out on 7·83 acres at Mungpoo and 24,457 on 14·03 acres at Sittong, giving a total of 21·86 acres. The total acreage planted during the year is 181·62 as against 169·78 last year. The *Ledgeriana* planted both at Mungpoo and Munsong was from seed of trees which had been found by analysis to be particularly rich in quinine.

Nurseries.—The seedlings in the nurseries on 31st March 1905 were 3,260 as against 47,152 on 31st March 1904. Discounting a few thousand seedlings which died off in one of the Munsong nurseries, the difference between the two figures testifies to the vigorous way in which planting out had been pushed on before the end of the financial year.

The number of trees in the permanent plantations on 31st March 1905 was 3,573,714, distributed as follows:—Mungpoo Division 2,210,018, Sittong 254,397, Munsong 1,109,299. The total number was made up of the following species:—*Cinchona Ledgeriana* 2,830,035, *No. 1 Hybrid* 429,409, *Cinchona Succirubra* 256,145, *No. 2 Hybrid* 55,995, *Cinchona Officinalis* 2,130. The increase over the number on 31st March 1904 is 266,951.

During the year 4,373 lbs. of *Cinchona Succirubra*, 50,500 lbs. of *Hybrid No. 1* and 256,405 lbs. of *Cinchona Ledgeriana*, giving a grand total of 311,278 lbs. of bark, were taken off the plantation. Of this amount, Mungpoo Division supplied 302,181 lbs. and Munsong the remainder.

3. *Factory and Outturn.*—During the year 491,227 lbs. of mixed *Ledger*, *Hybrid No. 1*, and *Officinalis* bark were worked up in the Factory, yielding 13,068 lbs. 12 oz. of sulphate of quinine—the largest quantity ever turned out by the Factory in one year; 545 lbs. of sulphate of cinchonidine, and 2,026 lbs. of cinchona febrifuge by the new process. The total outturn of the Factory for the year is 15,639 lbs. 12 oz. Compared with last year there has been an increased output of sulphate of quinine by 745 lbs. 4 oz., the average yield being 2·66 per cent.; an increased output of sulphate of cinchonidine by 255 lbs. and a decreased output of cinchona febrifuge by 4,774 lbs. The decrease in the latter is due to the fact that during the last half of the year manufacture of the febrifuge was suspended, while Mr. Richardson, the Assistant to the Government Quinologist, was elaborating a method of lightening the dark colour of the febrifuge as made by the new process. This he has accomplished.

4. *General charges.*—The charges against the Department as a whole amount to Rs. 16,741-10-3 as against Rs. 22,629-1-6 last year. The total is made up of Rs. 3,582 for clerical and menial establishment; Rs. 696-14 for postal and telegraph charges; Rs. 842 for advertisements; Rs. 737-8 for taxes; Rs. 8,096-15 for extensions of the plantation; Rs. 2,786-5-3 for additions to Factory plant.

5. *Plantation charges.*—The charges debited against the plantation amount to Rs. 78,572-3-6 as against Rs. 81,612-15-6 last year. Against this has to be placed 311,278 lbs. of dried bark harvested during the year.

6. *Factory charges.*—The actual working expenses of the Factory were Rs. 47,467-14-5, being Rs. 42,102-1-2 incurred in the manufacture of sulphate of quinine, Rs. 2,135 in the manufacture of sulphate of cinchonidine, and Rs. 3,230-13-3 in the manufacture of cinchona febrifuge. To this has to be added Rs. 38,000 expended in purchasing 106,813 lbs. of bark and Rs. 2,485-14, the cost of its carriage to the Factory, and Rs. 13,958-5-4 for purchase of 1,000 lbs. of quinine sulphate from the Madras Government Factory. The total expenditure in connection with the Factory is therefore Rs. 1,01,912-1-9.

To produce the outturn detailed in paragraph 3, there were used of *Ledgeriana* bark, 191,724 lbs., valued at Rs. 54,521-10-5; of *Hybrid No. 1* bark, 156,007 lbs. 8 oz., valued at Rs. 19,500-15; of *Officinalis* bark in stock from last year, 52,718 lbs. 4 oz, valued at Rs. 18,751-11-3; of *Officinalis* bark purchased during the year, 90,776 lbs. 12 oz., valued at Rs. 32,294-14-7. Total 491,227 lbs. of mixed bark, valued at Rs. 1,25,069-3-3.

7. *Issues of manufactured articles.*—The issues of sulphate of quinine during the year amounted to 14,865 lbs. 9 oz., being an increase of 2,844 lbs. 1·5 oz. over last year's issue, and the largest amount ever sent out by the Calcutta office. During October demands were so urgent and heavy that 1,000 lbs. had to be purchased from the Madras Government Factory to aid in meeting them.

There was an increase of 1,667 lbs in the quantity required by medical depôts, an increase of 800 lbs. in the quantity required by the Inspector-General of Prisons in Bengal for making up into pice-packets, and an increase of 459 lbs. 13 oz. in the quantity taken by Government dispensaries and officers. On the other hand, there was a decrease of 38 lbs. 8 oz. in the quantity supplied to prisons in Bengal and of 50 lbs. in the quantity supplied to the Superintendent of the Central Prison, Lahore.

The issue of cinchona febrifuge shows a decrease of 112 lbs, due chiefly to the fact that the medical depôts, the Inspector-General of Civil Hospitals, and the Inspector-General of Prisons amongst them took 379 lbs. 8 oz. less than last year's supply. The general public, on the other hand, purchased 263 lbs. 12 oz. more than they did last year.

There has been very little demand for sulphate of cinchonidine. There were in stock on 1st April 1904 290 lbs., and during the year 545 lbs. were manufactured. Of the total of 835 lbs., only 51 lbs. 4 oz. have been issued during the year.

8 *Receipts.*—The total receipts for the year amount to Rs. 2,28,727-12-8, being a balance of Rs. 31,501-13-2 over the year's expenditure and an increase of Rs. 12,732-13-5 over last year's receipts. Cash receipts amount to Rs. 85,796-8, including Rs. 59,679 for sulphate of quinine, Rs. 23,265 for cinchona febrifuge, Rs. 537 for sulphate of cinchonidine, Rs. 1,734 for residual alkaloids, Rs. 268 for bark, Rs. 25 for seed, and Rs. 287-12 for miscellaneous articles. The book credits amount to Rs. 1,42,931-4-8, and are made up of Rs. 48,347-8 for issues in connection with pice-packets, Rs. 93,482-4-8 for issues to medical depôts, and Rs. 1,101-8 for issues to the Inspector-General of Prisons, Bengal. The outstandings on 31st March 1905 amounted to Rs. 573. The whole of the outstandings of 31st March 1904 were recovered.

9. *Stock account.*—There were in stock on 31st March 1905, sulphate of quinine 3,431 lbs. 1·5 oz., valued at Rs. 45,962-5-9; sulphate of cinchonidine 783 lbs. 12 oz., valued at Rs. 12,540; cinchona febrifuge 704 lbs., valued at Rs. 5,280; residual alkaloids 5,090 lbs., valued at Rs. 4,453-12; cinchona bark 1,254,267 lbs. 13 oz., valued at Rs. 3,12,296-9-10·4; oil 1,400 gallons, valued at Rs. 729-9-6; chemicals 24,633 lbs. 8 oz., valued at Rs. 2,170-9-6; sundry stores,

valued at Rs. 690-9-3. The values are calculated on the average rate at which stock of similar quality was sold during the year. It was discovered in course of the year that 40 lbs. 8 oz. of residual alkaloids had been incorrectly described as cinchona febrifuge. Accordingly that quantity has been transferred from the latter to the former in the stock account as shown in detail in Appendix C. 1.

10. *Balance Sheet.*—This is shown in the prescribed form and calculated according to the directions of Government as Appendix E. The surplus on the year's working is Rs. 6,157-5-8·4, or deducting non-recurrent charges Rs. 3,371-0-5·4.

11. *Sale of Quinine at Post-offices.*—The quantity of sulphate of quinine issued for conversion into pice-packets during the year was 4,660 lbs., being an increase of 746 lbs. over last year's issue.

12. *Miscellaneous.*—(*a*) *Fuel Plantation.*—Twenty-six acres of firewood plantation were cleared during the year, yielding 12,850 maunds of Khasia oak and 7,150 maunds of miscellaneous woods.

(*b*) *Land Rent.*—The land revenue amounted to Rs. 3,505-15-6. It was paid into the Darjeeling Treasury.

(*c*) *Roads.*—Towards the end of the year, with the consent of the Forest Department, a bridle road was constructed from Munsong down to the Teesta Valley Road by Mr. Kennedy, in charge of the Munsong Division This road shortens the distance between Mungpoo and Munsong by about eight miles, and should considerably facilitate the transport of bark from Munsong to the factory.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF JULY 1905.

THE deficiencies in the strength of the monsoon during June was to a certain extent compensated by the activity in July. Though the number of depressions which formed at the head of the bay or in the extreme south of the province, was unusually great, there were no periods of serious intermission between them, and rainfall was nearly continuous in all the Divisions of Bengal.

The storm which had formed on the last day of the preceding month at the head of the bay passed rapidly inland moving in a west by north direction into the Central Provinces. It was followed by a strong monsoon from the bay, and by its agency the apparent barrier which had previously stood in the way of the westward extension of the monsoon winds was broken down, general though for the most part light rain falling over the whole province during the first two or three days of the month. This first advance of the monsoon into Bihar, Chota Nagpur and Orissa was, however, even now of a feeble character, and it was not till some days later that the monsoon established itself effectively over the western parts of the province. This result was finally brought about by a general fall of pressure, rapid in the north and slow in the south of the bay monsoon area, which culminated in the formation of a second depression in the extreme south of the province on the morning of the 5th. This depression, moving in a more northerly direction than its predecessor, brought general and well-distributed rainfall to the whole of the province. Temperature, which had up to this time remained high in Bihar, though it had for some time been normal in the rest of the province, was by this last burst of rain brought to its usual level in the former division as well. After the disappearance of the storm on the 9th, the monsoon shewed signs of a temporary weakening in the bay due to a too rapid rise of pressure in the province, and this weakness was combined with an unfavourable distribution brought about by a subsequent fall of the barometer in Assam and on the North Arakan coast. Winds became westerly over North-East India, and the indraught from the bay being checked, rainfall diminished largely and in many parts altogether ceased from the 9th to the 10th. This temporary break in the rains was especially noticeable in the western divisions of the province.

A return, however, to normal conditions quickly took place, a falling barometer and a steepening of the bay gradient being followed on the 11th by the formation of a small depression at the head of the bay slightly to the south-east of Saugar island. Though remaining shallow, it slowly moved in a north by west direction into Bihar, and did not finally pass beyond the province till the 15th of the month. The rainfall which accompanied this storm was, though slightly defective in Assam and North Bengal, general throughout the remainder of the province. Temperature which had risen above the normal during the slight break referred to above, again began to fall with the appearance of the last distribution (the fall commencing in the east and gradullay extending westwards), and on the 12th was once more normal or below normal throughout.

After the final disappearance of this depression, the distribution again for a brief period assumed a character favourable to the extension eastwards of westerly winds, and rainfall for a day or two diminished in amount. This temporary fall was, however, rapidly succeeded by a fresh burst of activity on the part of the monsoon A generall fall of the barometer over the whole area and a rapid fall at the head of the bay accompanied the formation of still another storm in the latter region. This storm moved into the Central Provinces along a path somewhat more to the south than is usual at this time of the year, but nevertheless gave rise to very general precipitation from the 18th to the 20th.

The first serious retreat of the monsoon current in the bay followed this last period of disturbance. The deficiency was especially marked on the Arakan coast, where the general rise of pressure which had taken place in the wake of the storm had been comparatively slight and had been succeeded by a slow fall. The result of these changes was the establishment of an area of very uniform pressure in the eastern section of the northern half of the bay. Both the area and the amount of rainfall diminished very largely in the province, and it was not till the 25th that precipitation began again to increase, owing to the progress northwards of a storm which had formed in the northern half of the bay.

As early as the 21st there were indications of renewed activity of the monsoon in the extreme south of the bay, strong monsoon winds steadily advancing northwards and finally entering the region of uniform pressure off the Arakan coast. Squally weather accompanied their progress and preceded the formation of a small cyclone storm between the 20th and 24th slightly to the north-west of Diamond Island. The area affected by the storm was very wide, but it is difficult from the reports of the next few days to locate its actual centre. It would seem indeed from the behaviour of the coast winds that there were really two foci, one well to the north, which crossed the coast about the evening of the 25th, and the other which only entered Bengal on the morning of the 27th. The preliminary disturbance was, however, diffused and of no importance, and its existence was only indicated by the well-marked changes between the 25th and 26th in the direction of the winds (themselves feeble) on the Bengal and North Arakan coasts. The central region of the true storm was extremely localised, as is shown in part by the fact that the winds to the north of it were actually during the 26th being drawn into the area of the preceding disturbance. Further, though

it affected the weather of a very wide area, the actual variation of pressure, except in its immediate track, was small. As has been already stated, the storm crossed the Bengal coast a little to the east of Chittagong on the morning of the 27th. It showed considerable vitality, as after moving slowly northwards for two days, it was finally diverted almost due west between the 29th and 30th into Bihar; on the 31st it had disappeared from the reporting area. It gave moderate to heavy rain to the whole province with the exception of Orissa and Chota Nagpur, where the precipitation was small.

Temperature, which during the period immediately antecedent to the break in the rains mentioned above had been practically steady and normal, rose rapidly on the first appearance of weakness in the monsoon, and on the 23rd was generally above the normal. It was not till the 27th that the influence of the storm extended to the temperature, the heavy rainfall which then set on bringing it below the normal on the 28th in Assam, Lower Bengal, Chota Nagpur, and Bihar. On the last day of the month ordinary monsoon weather prevailed in Assam and Bengal.

Summary of pressure.—Owing to the large number of depressions, pressure shewed considerable variations during the month. Each storm was preceded by a greater or less general fall of the barometer, which in the actual path of the centre was in some cases fairly large, while after the depression had passed, pressure generally rose above the normal. The periods of high pressure were, however, of short duration, while the preceding defect from the normal was even in the actual path of the storm wave never very great. The average was thus fairly maintained with the result that though the mean pressure for the month was below the normal, the deficiency was extremely slight and moreover very uniform.

Summary of temperature.—As will be seen from the weather summary, the fluctuations of temperature followed those of the rainfall. The periods of high temperature were, however, for the most part of short duration, the only lengthened interval of hot weather being from the 22nd to about the 28th. For the rest of the month temperature was either normal or below normal, but on no occasion did the defect become considerable. The average mean temperature for the month was therefore nearly normal and this agreement with the average is shown both in maximum and minimum temperatures. If anything the former were a little higher than usual in South-West Bihar.

Summary of rainfall.—Rainfall was copious in South-West and East Bengal as well as in Bihar and Chota Nagpur. In the first division the fall was 175 per cent. of the normal, and in the other three about 125 per cent. It is only in North Bengal and Orissa that a slight deficiency is shown. This was due in the former case to be break, which occurred in the latter part of the month, being more prolonged in this division than in those previously mentioned, and in the latter to a general deficiency not only during this period but also for the last days of the month in the more southern parts of the division. The total deficiency was, however, slight, not amounting in either case to 20 per cent.

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

No. 83 Marine.—The following draft of rules which it is proposed to make under the Indian Petroleum Act, 1899, in place of those published under this Department Notification No. 105 Marine of 20th September 1904, is published for the information of persons likely to be affected by the rules.

DRAFT RULES.

4A. Notwithstanding anything contained in rules 3 and 4,* licenses for the possession of dangerous petroleum otherwise than in bulk shall be granted only on the following conditions:—

* For these rules, see notification No. 24 Marine, dated 15th March 1904.

(*a*) The petroleum must be stored in gas-tight tin or galvanized-sheet iron, steel or lead-plate drums or receptacles, each containing not more than 10 gallons and fitted with well-made filling holes and well-fitting screw-plugs or fitted with screw-cap with metal air-tight under-cap. Such drums or receptacles must be packed in strong wooden cases, the thickness of the wood being not less than half an inch. Provided that wooden cases shall not be necessary when the drums or receptacles are made of tin, galvanized-sheet iron, or steel, and have the following thickness of metal:—

	Not less than
(1) when the capacity does not exceed 2 gallons ...	25 B. W. G.
(2) when the capacity exceeds 2 gallons, but does not exceed 4 gallons	22 B. W. G
(3) when the capacity exceeds 4 gallons	16 B. W. G

(*b*) An air space of at least one-tenth of its capacity must be left in each drum or receptacle.

(*c*) The drums or receptacles must be so substantially constructed and secured as not to be liable, except under circumstances of gross negligence or extraordinary accident, to be broken or become defective, leaky or insecure.

(*d*) Before any vessel which contains or has contained dangerous petroleum is repaired by the licensee, or is sent by him to be repaired, the vessel shall, as far as practicable, be cleared of all dangerous petroleum and of all dangerous vapours arising from the same.

(*e*) The building in which the petroleum is to be stored must be constructed of masonry or other uninflammable material, with terraced, tiled or iron roof and a tiled, paved or earthen floor.

(*f*) Either (*1*) the doorways and other openings of such building must be built up to such a height above the level of the road or street, or the floor thereof must be sunk to such a depth below the level of the road or street, that the petroleum stored in it cannot flow out of the building in case of its escape from the receptacles in which it is contained, *or* (*2*) the building must be surrounded with a masonry wall or embankment sufficiently high to contain all the petroleum in the building in case of its escape therefrom: Provided that combination of methods (*1*) and (*2*) may be adopted.

(*g*) All ventilating openings in such building must be protected by strong wire gauze.

(*h*) No smoking or light or fire of any description shall be permitted at any time within or near any such building.

(*i*) All due precautions must be taken for preventing (*1*) accidents by fire or explosion and (*2*) access by unauthorised persons to any dangerous petroleum or to any vessels containing or intended to contain or having actually contained the same.

(*j*) Every person managing, or employed on or in connection with, the building in which the petroleum is stored shall abstain from any act whatever which tends to cause fire or explosion and the doing of which is not reasonably necessary, and shall prevent any other person from doing any such act.

(*k*) The said building shall be liable to inspection by an officer authorised in this behalf.

(*l*) No drum or other receptacle containing dangerous petroleum shall be opened or the petroleum drawn off within the room in which the stock of petroleum is kept.

(*m*) The filling or replenishing of any vessels with dangerous petroleum shall not be carried on, nor shall the contents of any such vessel be exposed, in the presence of fire or artificial light, except a light of such strength, position and character as is not liable to ignite any inflammable vapour arising from the petroleum; and no artificial light shall be brought within dangerous proximity of the place where any vessel containing dangerous petroleum is kept.

(*n*) The following distances must be kept clear from the protected works round the building in which the petroleum is stored, namely:—

Quantity to be stored.	Distances to be kept clear when dangerous petroleum is stored in drums of capacity not exceeding 4 gallons.	Distances to be kept clear when dangerous petroleum is stored in drums of capacity exceeding 4 gallons, but not exceeding 10 gallons.
Gallons.	Feet.	Feet.
Not exceeding 1,000	25	30
Exceeding 1,000, but not exceeding 5,000 ...	40	50
„ 5,000 „ „ 10,000 ...	60	70
„ 10,000 „ „ 15,000 ...	90	100
„ 15,000 „ „ 20,000 ...	130	150
„ 20,000 „ „ 30,000 ...	180	200
„ 30,000	200	200

(*o*) When the quantity of dangerous petroleum to be possessed does not exceed 40 gallons, the following conditions shall be imposed instead of those mentioned in clauses (*e*), (*f*) and (*n*), namely:—

(*i*) The store-house or building in which the petroleum is stored must be well ventilated, and must be constructed of uninflammable material, except that the doors and windows may be of wood.

(*ii*) When such store-house forms part of, or is attached to, another building, and the intervening floor or partition is of an unsubstantial or inflammable character or has openings therein, the whole of such building shall be deemed to be the store-house, and no portion of such store-house shall be used as a dwelling-house or as a place where persons assemble; and the store-house must have an entrance from the open air distinct from any dwelling-house or any place in which persons assemble.

If this maximum is exceeded by a candidate's selection he will be required to indicate one of his subjects, the marks for which should, in his case, be reduced so as to bring his maximum marks within the prescribed limit. The marks so reduced will be subject to a correspondingly reduced deduction under Clause 6.

5. The merit of the persons examined will be estimated by marks; and the number set opposite to each branch in the preceding regulation denotes the greatest number of marks that can be obtained in respect of it.

6. The marks assigned to Candidates in each branch will be subject to such deduction as the Civil Service Commissioners may deem necessary (*a*) in order to secure that no credit be allowed for merely superficial knowledge.

7. The Examination will be conducted on paper and *viva voce*, as may be deemed necessary.

Should any of the selected Candidates become disqualified, the Secretary of State for India will determine whether the vacancy thus created shall be filled up or not. In the former case, the Candidate next in order of merit, and in other respects duly qualified, shall be deemed to be a selected Candidate. A Candidate entitled to be deemed a selected Candidate, but declining to accept the nomination as such, which may be offered to him, will be disqualified for any subsequent competition.

In Hindustani the Candidate will be required to be acquainted with both the Persian and the Nagari character; and in the case of the last two Provinces mentioned above, a Candidate whose Vernacular Language is either of the languages shown against his Province, must offer the other for examination.

† These subjects may not be offered by any Candidate who has offered them at the Open Competition.

In this Examination, as in the Open Competition, the merit of the Candidates examined will be estimated by marks (which will be subject to deductions in the same way as the marks assigned at the Open Competition), and the number set opposite to each subject denotes the greatest number of marks that can be obtained in respect of it. The Examination will be conducted on paper and *viva voce*, as may be deemed necessary. This Examination will be held at the close of the year of probation, and will be called the "*Final Examination.*"

If any candidate is prevented by sickness or any other adequate cause from attending such examination, the Commissioners may, with the concurrence of the Secretary of State for India in Council, allow him to appear at the Final Examination to be held in the following year, or at a special examination.

10. The selected Candidates will also be tested during their probation as to their proficiency in Riding.

The examinations in Riding will be held as follows:—

Candidates who fail to obtain 100 marks, but are reported by the Civil Service Commissioners to have reached a minimum standard of proficiency in riding, and are certified by the said Commissioners to be entitled to be appointed to the Civil Service of India, will, on their arrival in India, be subjected to such further tests in riding as may be prescribed by their Government, and shall receive no increase to their initial salary until they have passed such tests to the satisfaction of that Government.

11. The Selected Candidates who, on examination, shall be found to have a competent knowledge of the subjects specified in Regulation 9, and who shall have satisfied the Civil Service Commissioners of their eligibility in respect of nationality, age, health, character, conduct during the period of probation, and ability to ride, shall be certified by the said Commissioners to be entitled to be appointed to the Civil Service of India, provided they shall comply with the regulations in force, at the time, for that Service.

12. Persons desirous to be admitted as Candidates must apply on Forms, which may be obtained from "The Secretary, Civil Service Commission, London, W, at any time after the 1st December, in the year previous to that in which the Examination is to be held. No person will be admitted to the Examination from whom the Secretary to the Civil Service Commissioners has not received on or before the 1st July (or, if that date should fall upon a Sunday or public holiday, then, on or before the first day thereafter on which their office is open), in the year in which the examination is to be held, an application, in the handwriting of the Candidate, on the prescribed form.

The Civil Service Commissioners are authorized by the Secretary of State for India in Council to make the following announcements:—

(i) *Selected Candidates will be allotted to the various Provinces upon a consideration of all the circumstances, including their own wishes; but the requirements of the Public Service will rank before every other consideration.*

(ii) *An allowance amounting to £100 will be given to all Candidates who pass their probation at one of the Universities or Colleges which have been approved by the Secretary of State,* viz., *the Universities of Oxford, Cambridge, Dublin, Glasgow, Edinburgh, St. Andrews and Aberdeen; Victoria University, Manchester; University College, London; and King's College, London: provided such Candidates shall have passed the Final Examination to the satisfaction of the Civil Service Commissioners, and shall, in the opinion of the Secretary of State, have conducted themselves well and complied with such rules as may be laid down for the guidance of Selected Candidates. The whole probation must ordinarily be passed at the same Institution. Migration will not be permitted, except for special reasons approved by the Secretary of State.*

(iii) *The allowance of £100 will not be paid to any Selected Candidate until he has been certified by the Civil Service Commissioners to be entitled to be appointed to the Civil Service of India; and every Certificated Candidate must, before receiving his allowance, give a written undertaking to refund the amount in the event of his failing to proceed to India.*

(iv) *All Candidates obtaining Certificates will be also required to enter into covenants, by which, amongst other things, they will bind themselves to make such payments as under the rules and regulations for the time being in force they may be required to make towards their own pensions or for the pensions of their families. The stamps payable on these covenants amount to £1.*

(v) *The seniority in the Civil Service of India of the Selected Candidates will be determined according to the order in which they stand on the list resulting from the combined marks of the Open Competitive and Final Examinations*

(vii) *Candidates rejected at the Final Examination held in any year will in no case be allowed to present themselves for re-examination.*

N.B.—A Manual of Rules and Regulations applicable to members of the Covenanted Civil Service of India has been compiled by permission of the Government of India, and may now be procured either from Messrs. A. Constable & Co., 16 James Street, Haymarket, S.W., or from Mr. E. A. Arnold, 37 Bedford Street, Covent Garden. Price 2*s.* 6*d.*

The Commissioners have been requested by the Secretary of State for India to draw the attention of Selected Candidates to the prefatory note attached to this manual, as it is considered important that it should be clearly understood that this compilation is not to be regarded in any other light than that of a collection, made for facility of reference, of certain information and rules; that it is by no means exhaustive, and that it is liable to such modifications as may from time to time be sanctioned by competent authority.

CIVIL SERVICE OF INDIA;

CLERKSHIPS (CLASS I) IN THE HOME CIVIL SERVICE; AND EASTERN CADETSHIPS.

Syllabus showing the extent of the Examination in certain subjects.

English Composition.—An Essay to be written on one of several subjects specified by the Civil Service Commissioners on their Examination Paper.

English Language and Literature.—The Examination will be in two parts. In the one the Candidates will be expected to show a general acquaintance with the course of English Literature, as represented (mainly) by the following writers in verse and prose, between the reign of Edward III and the accession of Queen Victoria:

Verse—Chaucer, Langland, Spencer, Shakespeare, Milton, Dryden, Pope, Gray, Collins, Johnson, Goldsmith, Crabbe, Cowper, Campbell, Wordsworth, Scott, Byron, Coleridge, Shelley, Keats.

Prose—Bacon, Sir Thomas Browne, Milton, Cowley, Bunyan, Dryden, Swift, Defoe, Addison, Johnson, Burke, Scott, Macaulay (Essays and Biographies).

A minute knowledge of the works of these authors will not be looked for in this part of the Examination, which will, however, test how far the Candidates have studied the chief productions of the greatest English writers *in themselves*, and are acquainted with the leading characteristics of their thought and style, and with the place which each of them occupies in the history of English Literature. Candidates will also be expected to show that they have studied in these authors the history of the English Language in respect of its vocabulary, syntax, and prosody.

The other part of the Examination will relate to one of the periods named below, which will follow each other year by year in the order indicated:—

1.	A.D. 1700 to A.D. 1800.

2.	A.D. 1800 to A.D. 1832.

3.	A.D. 1360 to A.D. 1600.
(1908)	[Chaucer to Spencer.]
4.	A.D. 1600 to A.D. 1700.
(1909)	[Shakespeare to Dryden.]

The Examination in this part will require from Candidates a more minute acquaintance with the history of the English Language and Literature, as illustrated in the chief works produced in each period, and will be based to a considerable extent, but by no means

exclusively, on certain books specified each year by the Commissioners.* The names placed under the dates are intended to suggest the general character of the literary development of the period, and, consequently, the natural limits of the Examination. All the works of Shakespeare, for example, will be regarded as falling within the period 1600 to 1700; all the works of Swift within the period 1700 to 1800; all the works of Scott and Wordsworth, and all the works of Macaulay within the period 1800 to 1832.

EVIDENCE OF AGE TO BE REQUIRED FROM CANDIDATES FOR THE CIVIL SERVICE OF INDIA.

I. Every Candidate born in the United Kingdom should be prepared to produce, when required, a Certificate from the Registrar-General of Births, Marriages, and Deaths, or from one of his provincial Officers. This Certificate may be obtained from the Registrar-General in London, Dublin or Edinburgh, or from the Superintendent Registrar of the district in which the birth took place.

II. A Candidate born of European parents in India should be prepared to produce, when required, a Certificate of Baptism from the district in which he was baptised. If this does not also mention the date of birth, it should be accompanied by a statutory declaration by one of the Candidate's parents, stating the date and place of birth. When such certificates are not in the possession of the candidates, an Extract from the Registers kept at the India Office will probably be obtainable.

III. A Candidate who is a Native of India must, *before he can be admitted to the Competition*, produce a certificate of age and nationality issued under Notification of the Government of India, No. 2252, dated 21st August 1888, as amended by Notification No. 404, dated 19th May 1898, and signed, should he be a resident in British India, by the Secretary to Government of the Province, or the Commissioner of the Division, within which his family resides, or should he reside in a Native State, by the highest Political Officer accredited to the State in which his family resides. *No other Certificates will be accepted for this competition.*

Except as noted in paragraphs II and III, every Candidate who proves to be successful is expected to produce a Certificate of *Birth*. The Civil Service Commissioners will not in ordinary cases accept a Certificate of Baptism, or other testimony, unless they are first satisfied that a Certificate of Birth cannot be procured.

Official Certificates of Birth may generally be obtained as follows:—

(*a*) *For persons born in England or Wales.*—From the Registrar-General, Somerset House, London, or from the Superintendent Registrar of the district in which the birth took place.

(*b*) *For persons born in Scotland.*—From the General Register Office, Edinburgh; or from the Registrar of the parish or district in which the birth took place.

(*e*) *For persons born in India of European parents.*—From the Director of Funds, India Office, London, S.W. [These are Certificates of *Baptism*, but they usually furnish the date of birth and are then accepted as Certificates of *Birth*.]

Any Candidate who cannot produce a Certificate of Birth from one of the authorities named should, if possible, procure a Certificate of Baptism, and should then apply to the Secretary, Civil Service Commission, for further instructions.

[*To be filled up by the Candidate himself, and returned with the Form of Application.*]

Port Adelaide river—No. 2 light beacon removed and red light exhibited.

No. 306 (second publication).—With reference to Notice to Mariners No. 279, dated 15th July 1905, issued by this office, the President of the Marine Board, Port Adelaide, has given further notice (No. 20 of 1905) informing Masters of Vessels, Pilots and others that Deepening Operations in the vicinity necessitate the removal of No. 2 Light Beacon, and that on and after the 1st July next, a Red Light in lieu thereof will be exhibited from the Red Pile Beacon south of No. 3. This Light on with No. 4 will point out when to turn off No. 2 lead (two Red Lights) and direct the course towards No. 3 Light Beacon. It should be noted that the numbers of the outer leads have been altered.

The positions of all the above lights, as well as those supplied by the Light's Passage Harbour Contractors, are shown on Amended Chart obtainable at these offices.

Sailing directions.

By night.—In approaching the anchorage vessels of deep draught should not bring the White Light on the old structure to bear north of N.E. by E. in order to avoid the four-fathom patch, which bears N.W. ¼ N. from the Light on Wonga Shoal; then get No. 1 lead [which consists of two Red Lights vertical seven (7) feet apart and Two White Lights vertical seven (7) feet apart] in line; keep these in line passing between the Occulting Light on the Red Buoy and the Outer Green Light on the North Bank, also between the other Green Lights on the North Bank and the White Lights on the revetment mound.

Steer on the same line until the two Red Lights of No. 2 lead are coming on; then steer with them on line until the Red Light south of No. 3 Beacon is on with No. 4; then direct the course to pass a safe distance off No. 3; then steer for a like distance off No. 4, and so on from Beacon to Beacon round the point until No. 9 is reached. From a safe distance off No. 9 the Lights of No. 10 lead will be seen; keep them in line until the Red Light is about a quarter of a point open to the right of the White Light of No. 11 lead; then gradually alter the course to bring the Lights of No. 11 lead in line; keep them in line (a sharp lookout being kept for the mooring buoys on the starboard hand) until the Lights of No. 12 lead are seen coming into line; proceed as before by altering the course before the Lights are on with each other. The same applies in the change from No. 12 to No. 13 leads; when the Lights on the wharves are seen opening out off Luff Point, alter the course so as to round the point at a safe distance, and then up the centre of the Channel, looking out for the Mooring Buoys on the starboard hand.

By day.—The directions by day are the same as by night, merely substituting the Beacons for the Lights.

In going outwards the directions are just the opposite to those given for coming inwards; but in such case, in changing from one lead to another, the course should be gradually altered when abreast of the Low (Red) Beacon of each lead, excepting No 2 lead. In this case, when abreast of No. 3 Beacon gradually alter the course to bring the Light of No. 4 Beacon between the Light of No. 3 Beacon and the Red Light on the Beacon south of it, until the two Red Lights of No. 2 lead are coming in line, then bring the Red Light on with No. 4 Beacon, and proceed outwards with No. 2 lead in line.

During the progress of the work at the Light's Passage Harbour Works masters of vessels exempt from pilotage may, if they so desire, avail themselves of the services of a pilot to assist them in passing such works, either in or out, at one-half the usual rates.

If the usual exemption flag is not hoisted, it will be taken as a signal that a pilot is required. At night, if a pilot is required, the usual signal for a pilot should be shown.

N.B.—Owing to the nature of the work in progress, this notice may require to be amended from time to time, and, therefore, should be treated as tentative only.

This affects Admiralty Charts 2589A and B, 1750 and 1752.

RESOLUTION ON THE ANNUAL REPORTS ON THE WORKING OF THE SHIPPING OFFICES AT CALCUTTA, CHITTAGONG, AND ORISSA PORTS FOR 1904-1905.

No. 1375Marine.

Government of Bengal.

MARINE DEPARTMENT.

Dated Calcutta, the 16th August 1905.

RESOLUTION.

READ—

Letter No. 226S., dated the 1st May 1905, from Shipping Master, Calcutta.
Memorandum No. 3309B., dated the 5th May 1905, from the Secretary to the Board of Revenue, Lower Provinces.
Letter No. 356C., dated the 26th April 1905, from the Commissioner, Orissa Division.

The receipts of the Calcutta Shipping Office during the year 1904-05 amounted to Rs. 85,723 against Rs. 78,751 in the previous year, showing an increase of Rs. 6,972. This is mainly due to an increase in the shipping, discharging and overtime fees, and also to the sale of discharge certificates.

2. The expenditure showed an increase of Rs. 18,745, the figures being Rs. 50,319 against Rs. 31,574 in 1903-04. There were small increases under most heads of expenditure, but the main cause was the opening of a Branch Shipping Office at the Kidderpore Docks under an additional Assistant Shipping Master. This office has proved a great convenience to the shipping. A sum of Rs. 8,916 was also paid during the year as overtime allowance to the staff for work done in previous years.

3. The receipts under "Trust Funds" amounted to Rs. 89,111, which with the balance of Rs. 9,989 unpaid from the previous year made up a total of Rs. 99,100. The receipts show an increase of Rs. 8,909 over the previous year. The disbursements amounted to Rs. 83,873, and of the balance remaining unpaid Rs. 1,162 lapsed to the State.

4. The number of seamen shipped and discharged were—

Shipped	...	...	...	...	41,943
Discharged	...	...	...	...	39,180

The decrease in the number of seamen shipped under European articles which has been a prominent feature in the reports of recent years, still continues; during the past year, however, the decrease was only 54 or about a fourth of that of the previous year. There was an increase of 3,033 in the total number of discharges, due to some extent to the crews of the new pilot vessel for the port and two vessels brought out by the Bengal-Nagpur Railway for the wagon ferry at Shalimar having been paid off at Calcutta and sent home. The shipments and discharges under Indian articles have increased by 322 during the last year. These facts show that the demands of trade are in the direction of substituting Indian for European seamen; the reason which has so often been expressed, is that, in addition to the crews being less expensive, Indian seamen are more amenable to discipline and give less trouble than Europeans.

5. In addition 64 seamen were shipped and 88 discharged by foreign Consuls.

6. The number of distressed seamen sent home increased from 65 to 70, due to the larger number of discharges under European articles. Of these, 31 were due to sickness and 39 to want of employment.

7. The value of money-orders sent by European seamen was Rs. 8,198, which is a little more than the previous year when it was Rs. 7,721.

8. Attempts were made during the year to obtain convictions against serangs and tindals accused of taking bribes for providing seamen with employment. It is, however, difficult to convict, as bribery, unless proved to be

accompanied by extortion, is not a cognizable offence, and the evidence as to extortion is always insufficient to convince Magistrates. The Shipping Office continues to exercise supervision when practicable. Two cases in which the crews of the S.S. *Orizaba* and the *Orontis* complained against the serangs were on enquiry proved to be false. A second complaint was also made by some of the crew of the former vessel for extortion during a previous voyage, but as the offence was alleged to have been committed at Sydney and London and not on the high seas no prosecution was instituted. One case against the serang and tindal of the S.S. *Clan Macmillan* was successful, and the accused were fined Rs. 10 each. A fifth case occurred in which the serang reported that he was threatened and ill-treated, and finally took his discharge for refusing to pay money to the Chief and Second Engineers. The Agents, however, reported that the serang was discharged as not having given satisfaction, and no action was taken by the Port Officer beyond referring the case to the Board of Trade. The charge of bribery brought against two native brokers of the Calcutta Shipping Office was on enquiry declared to be false, and the complainant was fined Rs. 300.

9. The case in which it was alleged that one of the European crew of the S.S. *Oronsay* was done to death by her Engineers at Colombo has been brought to the notice of the Board of Trade. No action was taken in India, as the Port Health Officer at Colombo stated that death was due to heart failure. There was another case reported of attempted murder, but the complainant did not proceed to take further action.

10. At the Port of Chittagong the number of seamen shipped and discharged was 40 and 758 against 75 and 876 in the previous year.

11. The receipts of the year amounted to Rs. 1,121 against Rs. 1,659 in the previous year or a decrease of Rs. 538. The decrease is due to the falling off of revenue under heads "Shipping fees," "Discharging fees," "Fines and Forfeitures" and "Overtime fees." There were no disbursements.

12. The receipts from the "Trust Funds" amounted to Rs. 53,329-8, and with the exception of Rs. 198 the whole was disbursed.

13. During the year the Shipping Master visited 91 vessels to enquire into matters affecting the vessels. No complaints regarding bad or insufficient food, drinking-water and accommodation of seamen were received.

14. Only one British seaman was shipped at False Point during the year. No seamen were discharged in the Shipping Office. The annual statement of shipping business transacted at False Point during 1904-05 shows a collection of Re. 1 only under the head "Shipping fees."

15. There were no transactions under the Merchant Shipping Act at the ports of Balasore, Chandballi and Puri during the year under review.

By order of the Lieutenant-Governor of Bengal,

W. A. INGLIS,

Secretary to the Govt. of Bengal.

RESOLUTION ON THE ANNUAL REPORT OF THE PORT OFFICER'S DEPARTMENT, CALCUTTA, FOR THE YEAR 1904-1905

No. 1370Marine.

Government of Bengal.

MARINE DEPARTMENT.

Dated Calcutta, the 16th August 1905.

RESOLUTION.

READ—

Letter No. 2596, dated the 30th June 1905, from the Port Officer, Calcutta, submitting the Annual Report of his Department for the year 1904-1905.

AT the close of the year there were 49 qualified Pilots on the strength, being the same number as in the previous year. Three casualties occurred during the year and were met by the appointment of three qualified leadsmen. The sanctioned number of pilots is 58. This number can only be worked up to gradually as leadsmen qualify. At the end of the year there were 17 leadsmen in training, as compared with 14 at the end of the last year.

2. The tonnage of vessels allotted to the different grades of pilots was slightly altered, and the following scale is now in use:—

Branch Pilots ...	... Above 3,400 tons.
Senior Master Pilots	... From above 1,800 tons to 3,400 tons.
Junior „ „ ...	... „ „ 1,800 to 2;800 tons.
Mate Pilots ...	... Up to 1,800 tons.

3. One thousand five hundred and nineteen vessels arrived at the port during the year, and the number of vessels that sailed from it was 1,508. The total number of arrivals and departures was thus 3,027, or 288 more than that of the previous year. These figures represent a gross tonnage of 5,678,220 inwards and 5,625,376 outwards. Of the total number of vessels visiting the port, only 25 were sailing ships. The average tonnage of steam and sailing vessels inwards and outwards was 3,734, against 3,585 in the previous year.

4. The receipts for pilotage during the year amounted to Rs. 13,54,160, against Rs. 12,23,300 of the previous year.

5. There has been an increase in the number of steamers drawing over 21 feet, which were piloted inwards and outwards during the year as compared with that of the preceding year. Altogether 15 vessels, 7 inward and 8 outward, were neaped for want of sufficient water on the bars, against only one such detention in the last year. Many vessels during the dry season left short of cargo to avoid being neaped. The number of vessels detained at the Sandheads for want of pilots was 13, as compared with 5 in the previous year and 17 in the year 1902-1903. The shortest detention was 9 hours 40 minutes, the longest 53 hours 45 minutes, the average being 18 hours 57 minutes.

6. There were 5 collisions and 23 groundings, as against 17 collisions and 16 groundings in the previous year. In one case of collision, the pilot concerned was held to blame for error of judgment. With regard to the groundings, the pilots were held to blame in six instances.

7. Thirty-seven preliminary enquiries into shipping casualties were held by the Port Officer, of which two were referred to Departmental Courts of Enquiry and nine to Special Courts of Enquiry. In eight cases, the pilots were held to blame and were suitably dealt with by this Government. One more Departmental Court was held in which the acting Chief Officer of the P. V. "*Fame*" was degraded four places on the Leadsmen's list for negligence while on duty. A Licensed Branch Pilot was also convicted and fined by the Chief Presidency Magistrate for causing the death of the 2nd Mate of the S. S. "*Gibraltar*" through negligence on his part. No Marine Court under Act XII of 1859 was held during the year.

8. One hundred and twenty-one candidates appeared at the examination for Colonial and Home Trade certificates of competency, of whom 75 passed; 331 candidates also appeared at the different examinations for certificates of competency as Masters, Serangs, Engineers and Engine-Drivers under Act VI of 1884, but only 121 passed.

9. Mr. G. Robertson, 1st Engineer and Shipwright Surveyor, and Mr. F. Olford, 2nd Engineer and Shipwright Surveyor, held their respective appointments up to 5th October 1904, when the former proceeded on furlough, and the latter took up the duties of the First Marine Surveyor making over charge of his duties as 2nd Engineer and Shipwright Surveyor to Mr. C. F. Laslett, R.I.M.

10. The work of the Department has been zealously and efficiently conducted by Commander E. J. Beaumont, R.I.M. Lieutenant C. B. Henley, R.I.M., continued to act as Assistant Port Officer and Deputy Shipping Master of Calcutta up to 16th June 1904, when he went on leave, returning to duty on 12th December 1904. During his absence, Lieutenant C. Gardner, R.I.M., officiated.

By order of the Lieutenant-Governor of Bengal,

Secretary to the Govt. of Bengal.

REPORT ON THE COTTON CROPS OF BENGAL, AUGUST 1905.

THE following is published for general information.

R. W. CARLYLE,

Offg. Chief Secy. to the Govt. of Bengal.

The 19th August 1905.

DEPARTMENT OF LAND RECORDS AND AGRICULTURE, BENGAL.

REPORT ON THE COTTON CROPS OF BENGAL, AUGUST 1905.

Explanatory.—The Government of India has recently ordered that the Director-General of Commercial Intelligence should issue four forecasts of cotton at uniform intervals of two months, viz., on (1) 15th August, (2) 15th October, (3) 15th December, and (4) 15th February. As provincial forecasts are to be submitted to the Director-General shortly before these dates, this forecast is issued as the first August forecast by this Department.

The August forecast under orders of the Government of India should deal only with the early cotton crop; but in some districts of the Province, especially in the Patna Division, the late crop is also sown before August. This forecast, therefore, while dealing with the early crop, generally also shows the progress made in the sowings of the late crop in these districts.

2. *Character of the season.*—In the Chittagong Hill Tracts, the most important area under early cotton in the Province, the season has been very favourable. Want of timely rain, however, has reduced the area under the early crop in Manbhum.

As for the late crop the most important district is Saran. Here as well as in other districts of the Patna Division sowings have been delayed by want of timely rain and are still in progress.

3. *Area sown.*—The appended table summarising the district reports shows that the five and ten years' averages of early cotton in the Province are 71,680 and 83,400 acres respectively. The area sown this year is 57,040 acres against 50,050 acres of last year.

As for the late cotton the five and ten years' averages of the Province are respectively 48,900 and 67,200 acres. The area sown up to now is 17,200 acres against 38,100 for the whole sowings of last year.

N. D. BEATSON BELL,

Offg. Director of the Dept. of Land Records and Agriculture, Bengal.

CALCUTTA,

The 11th August 1905.

[On an average of the five years ending 1903-1904 the area under cotton crops in the territory to which this forecast relates has represented some 1·2 per cent. of the total area under cotton crops in British India.]

The mean pressure, temperature, etc., are deduced from the traces of the Barograph and Thermograph, and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. Rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; p, passing temporary showers; d, drizzling rain.

BOUNDARIES.

North.—A demarcated line joining the Tista River and Buri Tista or Sidabari nadi; then this nadi for about 1·8 miles; then a demarcated line east, crossing the Begdubra Jhora and Gazliduba-Jalpaiguri Road; then running parallel to this road for ½ mile; then again running west and recrossing the road to the Gazliduba nadi.

East.—A demarcated line, starting from pillar No. 274 on the boundary where it crosses the Gazliduba nadi, first, in an easterly and then in a southerly direction for about two miles till it again meets the boundary at pillar No. 133; then round the Sidabari jote till it crosses the Apalchand nadi.

South.—The Apalchand nadi.

West.—The Tista river.

Brief description.—A narrow strip of riparian forest, running along the east bank of the Tista river, lying mainly between that river on the west and the Buri Tista and Apalchand nadis on the east. The forest contains mainly *khair*, *sissu* and mixed species of trees, a considerable quantity of grass land and a few *sál* trees on the east. It is chiefly of value on account of the grazing near the Tista.

Reasons for disforestation.—It has been held that the greater part, viz., 2,159 acres of this area, lies within the Baikuntpur estate according to the boundary of that estate as laid down by the Department of Survey of India in 1903. A few small acres outside this boundary line have been disforested, as they are too scattered and contain too few trees of sufficient value to be worth retaining as Reserved Forest.
